ABSTRACT

A REAR TRUNK LID FOR A VEHICLE HAVING A FOLDABLE ROOF

5 The lid (1) for a rear trunk (2) of a vehicle having a roof (3) foldable into the trunk (2) is connected to the bodywork (6) by means (7, 10) disposed at the front edge (4) and at the rear edge (5) of the lid (1) and whose function is either to lock or to hinge the lid (1) 10 in a manner such that said lid can open either from the front backwards or from the rear forwards, and control means (8) cause the lid (1) to open in either of opening directions or to be closed. According to the invention, the control means (8) comprise at least one 15 articulated arm (9) and an actuator (22) connected to the articulated arm (9) and to the bodywork (6), and which is adapted to move the articulated arm (9) and the lid (1).
